### A Report Description

A Helical Screw Blower is a positive displacement rotary machine, consisting a pair of intermeshing rotors, which are also known as: male and female rotors. These rotors move towards each other as the volume trapped between them and the housing decreases.

#### Scope of the Report:

Screw Blowers are more advanced compared with traditional roots style blower. Their profile resembles a helical screw which assist an engine producing exceptional horsepower. Roots or lobe type blower suffered poor efficiency compared with screw blowers as no internal compression taking place during the 360-degree rotation cycle, resulting in lower efficiency. Thus, rotary screw blowers hold substantial potential as a replacement to the roots blowers in the future years.

The worldwide market for Helical Screw Blowers is expected to grow at a CAGR of roughly xx% over the next five years, will reach 790 million US\$ in 2023, from 790 million US\$ in 2017, according to a new GIR (Global Info Research) study.

This report focuses on the Helical Screw Blowers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
