A Report Description

About Hydrocyclone

Hydrocyclones are devices used to separate or classify heavy and light materials by the use of centrifugal force. Hydrocyclones convert the incoming velocity of the liquid to rotary motion and separate them based on the ratio of their centripetal force to fluid resistance.

Technavio's analysts forecast the global hydrocyclone market to grow at a CAGR of 7.02% during the period 2018-2022.
