A Report Description

About - Global industrial valve actuators market

Actuators are used to manually or automatically control the movement and action of valves. Based on the type of valves, they can be used for the desired action. Industrial valve actuators are mainly of four types: pneumatic, hydraulic, electric, and mechanical. Valves actuators operate by opening, closing, or partially blocking passage ways to allow the movement of fluids from high pressure to low pressure or vice versa. Valve actuators are used across several process industries for the transportation of fluids between two points within an enclosed system

Technavio's analysts forecast the global industrial valve actuators market to grow at a CAGR of 5.31% during the period 2017-2021.
